Insight Two: Pueblo Nuevo - Percentage of Female & Male vs. Madrid

What is a population pyramid?

A population pyramid is a graphical illustration that shows the distribution of various age groups in a population, which forms the shape of a pyramid when the population is growing. It is used in ecology to determine the overall age distribution of a population; an indication of the reproductive capabilities and likelihood of the continuation of a species. There tends to be more females than males in the older age groups, due to females' longer life expectancy.

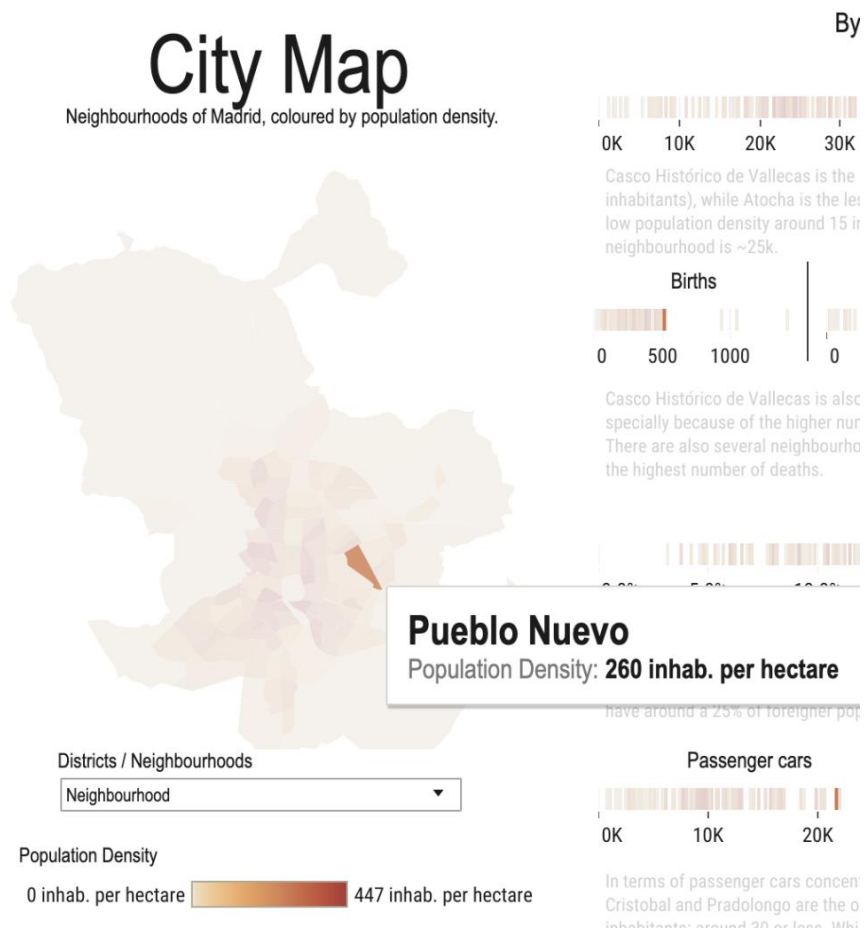

East Neighbourhoods Population Pyramids

By clicking on Pueblo Nuevo for population pyramids, the figure is shown. The percentage of females for age 45-49 is 4.2% which equals the overall distribution of Madrid for female is 4.2%. Therefore, majority of the female in the East Neighborhoods are from 45-49. Similar for the male as well.
